PROJECTS

Interactive Portfolio Website

- Leveraged HTML and CSS to craft an engaging, user-friendly portfolio displaying skills, projects, and professional background.
- Created a dynamic showcase platform using HTML and CSS, spotlighting skills, projects, and professional journey.

Deep learning based Pneumonia classifier

Seven Convolutional Neural Network (CNN) models were evaluated, and the ResNet-50 demonstrated superior performance with higher accuracy and improved generalization, making it the preferred choice for future use in various computer vision tasks.

Project Chatbot & Domain Specific and OpenDomain

Project Description: Developed a domain-specific medical chatbot in Python on Collaboratory. The chatbot extracts and processes information from medical articles, ensuring case consistency, noise removal, and tokenization. Tailored to answer user queries based on articles from websites like "wonderfulengineering.com." Demonstrates expertise in NLP and domain-specific chatbot development.
